

Internship question: front-end

Problem statement: A two page responsive website adapted to the following screen sizes - large screen, regular computer, i-pad, mobile.

Requirements:

1. The database should contain a simple list of objects with associated information derived from a backend on Django.
2. The backend (in Django) should communicate with the front end.
3. Two svg elements adapted to screen size
4. Cookie points for stylized, user friendly pages.
